The long journey of Centropen

A traditional Czech manufacturer of writing and drawing supplies since 1940.

Important milestones and events in the company´s history:

1940
The factory for the production of STENO fountain pens and technical pens was established by two entrepreneurs joining forces in Dačice - and by the next year the company employed 20 staff.

1945
Moved to the current location in 9th May Street, the products OMEGA are becoming known not only in Czechoslovakia but abroad as well.

1948
The company, now with 140 employees, is incorporated into Centropen Pardubice. In addition to writing pens, the company´s production was expanded to 30 other types of stationery.

1948–1960
The company produces up to 11 thousand units per day (for example Žák or Student types) and is becoming one of the biggest employers in the region.

1960–1970
The manufacturing plant in Dačice, with more than 500 employees, focuses on the production of pens composed of plastic parts, tampons, tips and inks, and the production of 300 thousand markers per day is added to almost 20 thousand fountain pens per day.

1970–1980
In Dačice, markers for the whole of Eastern Europe are produced and the enterprise enlarges the range to more than 150 types. In line with global trends, the amount of automated production is increasing.

1980–1990
The replacement of polystyrene with polypropylene symbolises significant technological changes and the genesis of new product lines, including the 1901 liner and the 2790 marker. The company gains independence and goes back to the original Centropen brand.

1990–2000
Centropen is privatised and becomes a joint-stock company with Czech owners. The company has the largest number of employees in its history, and holds a global monopoly on the production of blowing pens.

2000–2010
Centropen in Dačice, with 450 employees, manufactures almost 200 types of products with a daily production volume of 1.1 million and is the only manufacturer of writing and drawing instruments based on tip-tampon-ink in the Czech Republic.

2010–2020
Significant development in the field of writing instruments for children – roller TORNADO COOL, moulded from two types of materials. The fleet of machines was modernised with the aid of EU grant programmes.

2020
A further item, HIGHLIGHTER STYLE, with a new flat design, is included in the product range.

2020–2024

- Thanks to investment in the manufacturing process from 2020, we have been able to reduce the annual production of CO_2 by approximately 577 tonnes. That amount is equivalent to, for example, 4 550 000 km covered by a petrol-driven vehicle. The load on the planet would similarly be reduced if every one of our employees travelled 12 000 km less by car each year.
- Examples of reducing energy consumption include heat recovery from exhaust air using recuperation units, gradual transition to LED lighting, strengthening the thermal insulation capabilities of flat roofs, along with window replacement, and decentralization of the heating system.
- From 2022, we sell our bestsellers partly from recycled plastics. Although the new Centropens permanents have „only" 53 and 57 % of recycled plastics, more than 85 tons of recycled plastic are processed annually.
- We can be proud of the waste-free production of plastic parts, because we process all the waste from production. At each production stage, technologies are introduced to reduce the volume of waste and to prevent pollution.
- By the establishment of a photovoltaic power plant on all the roofs of the production halls and warehouses we reduce the ecological footprint. Reduction of our need for outside electricity is estimated by one third annually, depending on sunshine.

investment from 2020

annual saving of 577 tons CO_2

the same as saving 4 550 000 km of driving per annum

the same as saving 12 000 km per employee per annum

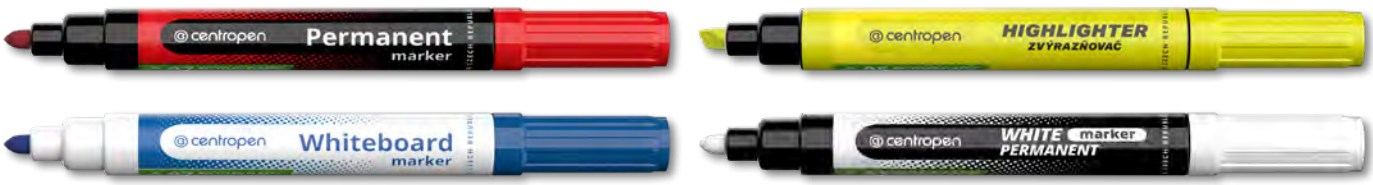

Starting 2025

In 2025, we will present our final ESG report, covering the financial year ending in 2024. This will be our first official output on the ESG approach as CENTROPEN, a.s., and will serve as a foundation for future follow-ups. This report will provide the data-driven insights needed to make strategic decisions that foster a sustainable future for our organization and the communities around us.

We will complete our product and image rebranding along with the redesign of our packaging, bringing a modern look that better reflects our company's values. At the same time, we will introduce an innovative solution for labeling our best-selling products. The new marking of the 85xx series using transfer foils will bring vibrant colours and clear product identification to customers. This step will strengthen the attractiveness of our products and improve user experience.

Sustainability and the use of recycled materials remain a top priority for us, demonstrated by achieving up to 97% recycled plastics in our 85xx series.

97 % recycled plastic

SECURITY UV – SET 2699

marker for identifying valuables
ergonomic grip
special permanent ink
writing line only visible under UV lamp
round tip
line width: 0,6–1 mm

Young school children and pre-school children need to learn how to hold a pen correctly from the very beginning, making their first steps in writing and drawing much easier. Centropen has developed a perfect ergonomic grip, the final design of which is based on strict laboratory and technological parameters and testing. Young school children and their parents will also appreciate the ink's stability and long-lasting refills.
